INSTRUCTIONS FOR USE OF AIR CONNECTIONS FOR ENGAGEMENT/DISENGAGEMENT OF THE MAIN TRANSMISSION ON HORIZONTAL AND VERTICAL SPLIT-SHAFT UNITS

CODE 32901/2/3/4/5/6 - 42901/2/3/4/5/6

G1/8”AIR CONNECTIONS FOR ENGAGEMENT/DISENGAGEMENT OF THE MAIN TRANSMISSION

M16X1.5 CONNECTION FOR TRANSMISSION DISENGAGED SIGNAL SWITCH

PZB wishes to inform you that, due to modifications to the horizontal and vertical split-shaft units with code 32901/2/3/4/5/6 and 42901/2/3/4/5/6 (adoption of “Automotive” switch), both air connections for engagement and disengagement of the main transmission are located on the front of the casing (vehicle cab side); located on the opposite side is the connection for the transmission disengaged signal switch (see photo above and drawings on page 2).

Therefore,the G1/8”connection ref. **A** is to be used for the air inlet for disengagement of the main transmission, the G1/8” connection ref. **B** for engagement of the main transmission, while the M16x1.5 connection ref. **C** is for the transmission disengaged signal switch kit (Merit switch code 205E5890000 + wiring code 205E4820000).

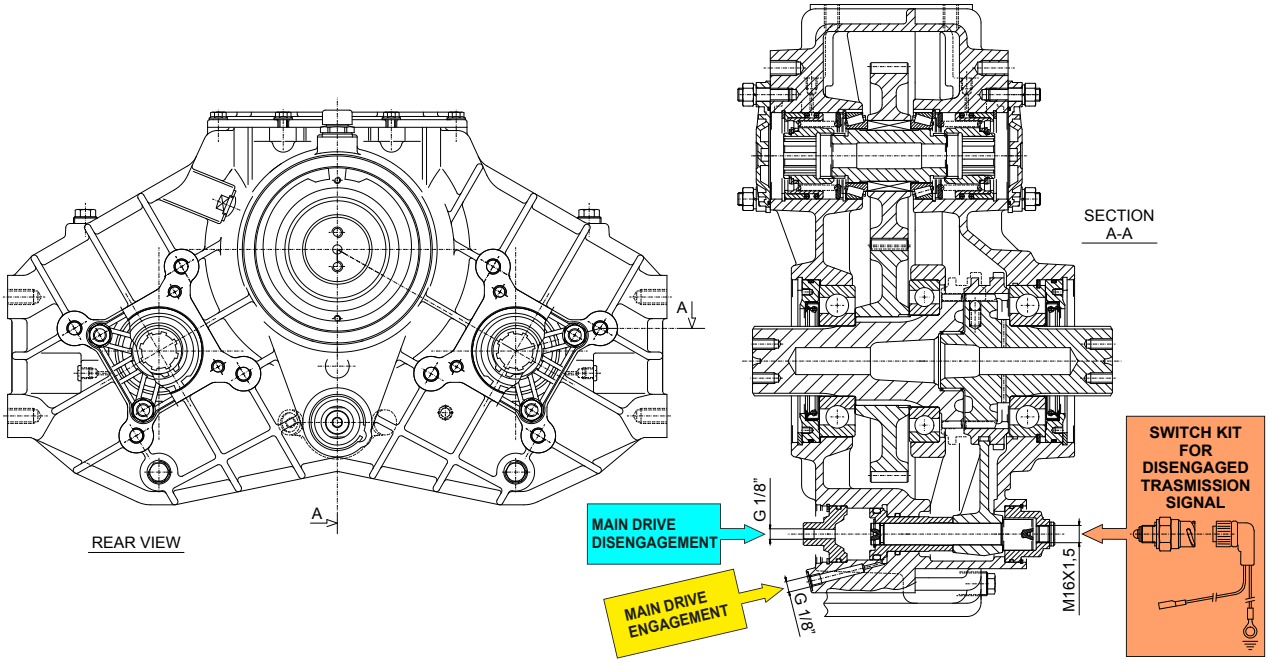

For further clarification, please contact our sales office.
